# MC VPNGate at a glance

## The MC Technologies VPN solution for your industrial M2M application as remote maintenance, monitoring, networking, alarms, etc.

VPNGate allows you to connect an MC Technologies router or your PC to your VPN in just a few simple steps. As a result connected network devices such as SPS, IP cameras, IP displays and sensors can be accessed via all networks. A simple and cost-effective solution!

VPNGate generates all the necessary certificates and automatically configures your devices. Your VPN is managed via a secure Web portal, where you can create groups and users; assign them rights and devices and monitor all access. This makes it possible to represent your company's entire organization by simply using "drag and drop".

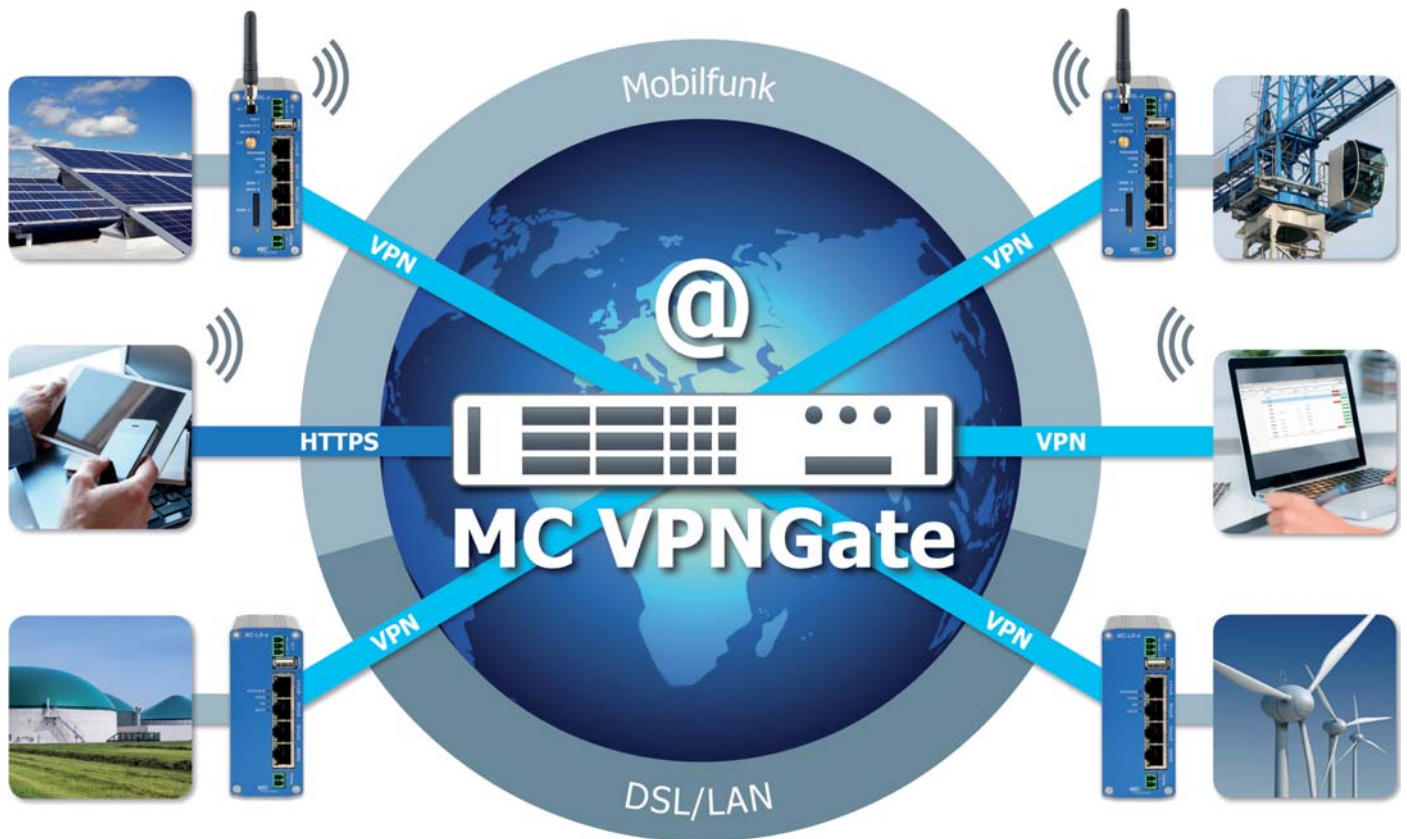

You decide who is allowed what access to your devices. The only operating precondition is that your devices are connected to the Internet. No expensive private APN's; no public IP addresses; no roaming charges; no contractual commitment to a mobile network operator.

- Multi-client enabled system, freely scalable
- High availability thanks to redundant servers in Germany
- Highest degree of security thanks to certificate-based VPN connections and firewall
- Automatic creation and up-dating of certificates
- Simple administration via the Web portal, secure access via HTTPS
- Routing right up to your network components
- Hierarchical group structure
- You define group and user rights
- **MC Technologies routers are configured fully automatically**

**Start-up can be carried in just a few steps:**

- Set up the router via the Web portal and assign a group or user.
- Unpack the router; insert the SIM card; switch it on.
- **Done!** The router is now connected to your VPN and can be accessed.

**MC VPNGate is available:**

- For self-hosting
- On exclusively dedicated server hardware at our data centre
- As a client on the MC Technologies server

Individual requirements, add-ons and modifications within the scope of a project are possible.

## Company profile

**We are a leading European provider of innovative solutions for:**

- Machine-to-machine (M2M) hardware and end-to-end solutions
- GSM/GPRS/UMTS/HSPA+/LTE/GPS modules, terminals, router and industrial computers
- Short range modules and solutions
- Customer-specific cable assemblies
- Connectors and assembly groups for industry
- Measuring and inspection technology

**Thanks to our many years of experience we can offer:**

- A broad, attractively priced range of products meeting German quality standards
- Competent technical advice on product selection and design-in
- Development of the optimum solution specifically tailored to your application
- Quick, professional implementation of all associated commercial and logistical processes
- Comprehensive service concepts for our products and solutions
